

Sort Data

**Sort Data**

**On Website:**

You would be able to sort data according to submission dates by either ascending or descending order on the top right hand corner.

The screenshot shows the Jet Admin interface for a form titled "Form for Testing". At the top, there are navigation tabs: "Records", "Fields Mapping", "Automation", "Customise UI", "Share Form", and "Settings". Below these are several action buttons: "Add Record", "Import Data", "Filter Data", "Charts", and "Refresh". On the right side, there are controls for "Realtime" (unchecked), "Records per page" (set to 7), "Order by" (set to "Descending" and highlighted with a red box), and "View Mode" (set to "Table view"). Below the controls is a table with the following columns: Select, Edit, Text Field Input, Dropdown list of static options, Dynamic Dropdown list, Numeric, Currency, Date, DateTime, Email, GPS, GPS Insert, GPS Update, Long Text, File, and Image. The table contains one row of data with the following values: a checkbox, an edit icon, "as12321", "Alpha", "Omega", "123", "123.00", "123", "2023/05/18 14:01", "email@email.com", "1.3198699,103.8869675", "1.3198801,103.8869948", and "test". On the right side of the table, there is a "add record" button and a "File" icon.

This feature is not available on mobile yet.
