

Dropdown with Show/Hide

Dropdown list with Show/Hide

Upon selecting different options for the Dropdown List, we can hide or show the other fields in the same form.

In this example, the dropdown list consists of 3 options, A, B, C.

The image shows a form titled "Dropdown with Show/Hide". It contains four input fields. The first field is a dropdown menu with the text "Select" and a small upward-pointing triangle. The dropdown menu is open, showing three options: "A", "B", and "C". The second field is a text input field with the label "first:". The third field is a text input field with the label "second:". The fourth field is a text input field with the label "third:". The form is enclosed in a light gray border.

Step 1: We first create a form with a dropdown list and a few other fields.

- Create a form named "Dropdown with Show/Hide"
- Add a dropdown field with options A,B,C
- Add 3 other fields.

Dropdown with Show/Hide > Fields Mapping Form ID: 458

Select <input type="checkbox"/> All	Edit	Field Order	Field Name	Field Label	Required	Allow Multiedit	Read Only	Unique Value	Alphanumeric Sort	Same value	Listbox ID	Listbox Show Field	Field Type
<input type="checkbox"/>		1	dropdown	dropdown	0	0	0	0	0	0	0		Static-dropdown
<input type="checkbox"/>		2	first	first	0	0	0	0	0	0	0		text
<input type="checkbox"/>		3	second	second	0	0	0	0	0	0	0		text
<input type="checkbox"/>		4	third	third	0	0	0	0	0	0	0		text

Step 2. Next, we need to edit the dropdown field.

Field Settings

Field Information

Field Name *: i

Field Label *:

Tips:

On Change Action:

```

if (get('dropdown')== 'A') {
  show('first');
  hide('second');
  hide('third');
}else if (get('dropdown')== 'B'){
  hide('first');
  show('second');
  hide('third');
}else if (get('dropdown')== 'C'){
  hide('first');
  hide('second');
  show('third');
}else {
  show('first');
  show('second');
  show('third');
}

```

Field Order:

Cancel
Save

```
        if (get('dropdown')== 'A') {
show('first');
hide('second');
hide('third');
}else if(get('dropdown')== 'B') {
hide('first');
show('second');
hide('third');
}else if(get('dropdown')== 'C') {
hide('first');
hide('second');
show('third');
}else {
show('first');
show('second');
show('third');
}
```

This is what we need to add to the On Change Action portion of the dropdown field.

- In our example, we use the field name of our dropdown list field which is 'dropdown' as part of the condition within the if else statements.
- 'first', 'second', 'third' are the field names of the other fields. Depending on how you want to show or hide the field, put the fieldname within the Show or Hide functions.
- Other than the selectable option, we also need to take care of the scenario where no options are picked. Hence under the last else statement, it will show all 3 fields.
